20 issues with duplicate title tags	20
About this issue: Our crawler reports pages that have duplicate title tags only if they are exact matches. Duplicate <title> tags make it difficult for search engines to determine which of a website's pages is relevant for a specific search query, and which one should be prioritized in search results. Pages with duplicate titles have a lower chance of ranking well and are at risk of being banned. Moreover, identical <title> tags confuse users as to which webpage they should follow.	0
How to fix: Provide a unique and concise title for each of your pages that contains your most important keywords. For information on how to create effective titles, please see this Google article . You can also view the On-Page SEO Basics: Meta Descriptions article	
20 pages have duplicate meta descriptions	20
About this issue: Our crawler reports pages that have duplicate meta descriptions only if they are exact matches. A <meta description> tag is a short summary of a webpage's content that helps search engines understand what the page is about and can be shown to users in search results. Duplicate meta descriptions on different pages mean a lost opportunity to use more relevant keywords. Also, duplicate meta descriptions make it difficult for search engines and users to differentiate between different webpages. It is better to have no meta description at all than to have a duplicate one.	0
How to fix: Provide a unique, relevant meta description for each of your webpages. For information on how to create effective meta descriptions, please see this Google article . You can also view the On-Page SEO Basics: Meta Descriptions article	

Errors	Amount
1 page returned a 4XX status code About this issue: A 4xx error means that a webpage cannot be accessed. This is usually the result of broken links. These errors prevent users and search engine robots from accessing your webpages, and can negatively affect both user experience and search engine crawlability. This will in turn lead to a drop in traffic driven to your website. Please be aware that crawler may detect a working link as broken if your website blocks our crawler from accessing it. This usually happens due to the following reasons: - DDoS protection system - Overloaded or misconfigured server How to fix: If a webpage returns an error, remove all links leading to the error page or replace it with another resource. To identify all pages on your website that contain links to a 4xx page, click "View broken links" next to the error page. If the links reported as 4xx do work when accessed with a browser, you can try either of the following: - Contact your web hosting support team - Instruct search engine robots not to crawl your website too frequently by specifying the "crawl-delay" directive in your robots.txt	1 0
0 pages returned 5XX status code	0 0

Warnings

Warnings

Project name: www.stocadvisory.com

Warnings	Amount
22 pages have low text-HTML ratio About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	22 0
19 images don't have alt attributes About this issue: Alt attributes within tags are used by search engines to understand the contents of your images. If you neglect alt attributes, you may miss the chance to get a better placement in search results because alt attributes allow you to rank in image search results. Not using alt attributes also negatively affects the experience of visually impaired users and those who have disabled images in their browsers. For more information, please see these articles: Using ALT attributes smartly and Google Image Publishing Guidelines How to fix: Specify a relevant alternative attribute inside an tag for each image on your website, e.g., "".	19 0

Warnings	Amount
9 pages have a low word count About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.	9 0
8 issues with unminified JavaScript and CSS files About this issue: Minification is the process of removing unnecessary lines, white space and comments from the source code. Minifying JavaScript and CSS files makes their size smaller, thereby decreasing your page load time, providing a better user experience and improving your search engine rankings. For more information, please see this Google article. How to fix: Minify your JavaScript and CSS files. If your webpage uses CSS and JS files that are hosted on an external site, contact the website owner and ask them to minify their files. If this issue doesn't affect your page load time, simply ignore it.	8 0
6 pages don't have an h1 heading About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.	6 0

Warnings	Amount
3 pages don't have meta descriptions About this issue: Though meta descriptions don't have a direct influence on rankings, they are used by search engines to display your page's description in search results. A good description helps users know what your page is about and encourages them to click on it. If your page's meta description tag is missing, search engines will usually display its first sentence, which may be irrelevant and unappealing to users. For more information, please see these articles: Create good titles and snippets in Search Results and On-Page SEO Basics: Meta Descriptions How to fix: In order to gain a higher click-through rate, you should ensure that all of your webpages have meta descriptions that contain relevant keywords.	3 0
1 page has too much text within the title tag About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article How to fix: Try to rewrite your page titles to be 70 characters or less.	1 0
0 external links are broken	0 0
0 external images are broken	0 0
0 links on HTTPS pages lead to HTTP page	0 0

Notices	Amount
6 links on this page have no anchor text About this issue: The issue is triggered if a link (external or internal) on your site has an empty or naked anchor (i.e., just a URL), or anchor text only contains special characters. This issue makes it difficult for the crawlers to understand what the page is about and affects the performance of the linked-to page in search results. How to fix: Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. Learn more	6 0
Llms.txt not found About this issue: The <code>llms.txt</code> file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources. How to fix: • Create an <code>llms.txt</code> file. • Place it in your website's root directory and ensure the file is accessible. • Refer to llmstxt.org for examples and tips on how to properly create and manage it.	1 0
Robots.txt not found About this issue: A robots.txt file has an important impact on your overall SEO website's performance. This file helps search engines determine what content on your website they should crawl. Utilizing a robots.txt file can cut the time search engine robots spend crawling and indexing your website. For more information, please see this Google article How to fix: If you don't want specific content on your website to be crawled, creating a robots.txt file is recommended. To check your robots.txt file, use Google's robots.txt Tester in Google Search Console	1 0

Notices	Amount
1 page has low semantic HTML usage	1
About this issue:	0
The ratio of semantic HTML tags to other HTML tags is low. Semantic HTML adds structure to content and improves indexing accuracy, helping search engines better understand page hierarchy and key information.	
How to fix:	
Make sure your content is well organized and use the most common semantic HTML.

4xx errors

Detailed Issue Description

About this issue:

A 4xx error means that a webpage cannot be accessed. This is usually the result of broken links. These errors prevent users and search engine robots from accessing your webpages, and can negatively affect both user experience and search engine crawlability. This will in turn lead to a drop in traffic driven to your website. Please be aware that crawler may detect a working link as broken if your website blocks our crawler from accessing it. This usually happens due to the following reasons:

- DDoS protection system
- Overloaded or misconfigured server

How to fix:

If a webpage returns an error, remove all links leading to the error page or replace it with another resource.

To identify all pages on your website that contain links to a 4xx page, click "View broken links" next to the error page.

If the links reported as 4xx do work when accessed with a browser, you can try either of the following:

- Contact your web hosting support team
- Instruct search engine robots not to crawl your website too frequently by specifying the "crawl-delay" directive in your robots.txt

Missing meta description

Detailed Issue Description

About this issue:

Though meta descriptions don't have a direct influence on rankings, they are used by search engines to display your page's description in search results. A good description helps users know what your page is about and encourages them to click on it. If your page's meta description tag is missing, search engines will usually display its first sentence, which may be irrelevant and unappealing to users.

For more information, please see these articles: [Create good titles and snippets in Search Results](#) and [On-Page SEO Basics: Meta Descriptions](#)

How to fix:

In order to gain a higher click-through rate, you should ensure that all of your webpages have meta descriptions that contain relevant keywords.

Low word count

Detailed Issue Description

About this issue:

This issue is triggered if the number of words on your webpage is less than 200.

The amount of text placed on your webpage is a quality signal to search engines.

Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts.

For more information, please view [this video](#)

How to fix:

Improve your on-page content and be sure to include more than 200 meaningful words.

Long title element

Detailed Issue Description

About this issue:

Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page.

For more information, please see [this Google article](#)

How to fix:

Try to rewrite your page titles to be 70 characters or less.

Missing h1

Detailed Issue Description

About this issue:

While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly.

How to fix:

Provide a concise, relevant h1 heading for each of your page.

Missing ALT attributes

Detailed Issue Description

About this issue:

Alt attributes within tags are used by search engines to understand the contents of your images. If you neglect alt attributes, you may miss the chance to get a better placement in search results because alt attributes allow you to rank in image search results.

Not using alt attributes also negatively affects the experience of visually impaired users and those who have disabled images in their browsers.

For more information, please see these articles: [Using ALT attributes smartly](#) and [Google Image Publishing Guidelines](#)

How to fix:

Specify a relevant alternative attribute inside an tag for each image on your website, e.g., "".

Links with no anchor text

Project name: www.stocadvisory.com

Detailed Issue Description

About this issue:

The issue is triggered if a link (external or internal) on your site has an empty or naked anchor (i.e., just a URL), or anchor text only contains special characters. This issue makes it difficult for the crawlers to understand what the page is about and affects the performance of the linked-to page in search results.

How to fix:

Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. [Learn more](#)

Llms.txt not found

Detailed Issue Description

About this issue:

The `<span style="font-style: italic">llms.txt</span>` file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources.

How to fix:

- Create an `<span style="font-style: italic">llms.txt</span>` file.
- Place it in your website's root directory and ensure the file is accessible.
- Refer to llmstxt.org for examples and tips on how to properly create and manage it.

Robots.txt not found

Detailed Issue Description

About this issue:

A robots.txt file has an important impact on your overall SEO website's performance. This file helps search engines determine what content on your website they should crawl.

Utilizing a robots.txt file can cut the time search engine robots spend crawling and indexing your website.

For more information, please see [this Google article](#)

How to fix:

If you don't want specific content on your website to be crawled, creating a robots.txt file is recommended. To check your robots.txt file, use Google's robots.txt Tester in [Google Search Console](#)

Low Semantic HTML usage

Detailed Issue Description

About this issue:

The ratio of semantic HTML tags to other HTML tags is low. Semantic HTML adds structure to content and improves indexing accuracy, helping search engines better understand page hierarchy and key information.

How to fix:
Make sure your content is well organized and use the most common semantic HTML. [Learn more](#)
